the most gourmet inu

whitepaper

# introduction.

the Inu family of tokens is particularly appreciated by the crypto community but often the project is little sought after or brings nothing special. That's why I decided with my sidekick to create Bishoku! The original idea comes from the universe of Hunter X Hunter where there are characters called "Gourmet Hunter" who are mercenaries in search of new flavors.

# story and purpose.

I liked the concept of gourmet and this is how the idea of Kishoku Inu came about. From this, the idea was to add a buyback mechanism to allow the project to continue. The main features that will be developed will be a very complete portfolio tracker. A small feature will also be to be able to obtain your Bishoku license depending on the number of tokens owned.

# buyback mechanism.

Meme tokens are often much more volatile and can drop or climb very quickly. this is why we have integrated a buyback mechanism that will allow the price to be maintained.

it is often due to the lack of fundamental that we use the same tokens and we are aware of it. Although Bishoku will have specific features, we wanted to add this buyback mechanism

# buyback mechanism.

How it works ?

During each transaction a part of the BNB is sent to the contract.

When the contract reaches a certain cap (by default 1 BNB), a part of it is used to buy back the \$BISHOKU tokens.

Once these are redeemed, they are automatically sent to the burn address. It's important to note that everything is done automatically and therefore the process cannot be altered and the funds cannot be diverted.

# tokenomics.

## Simple tokenomics

Static rewards 4%

Buyback 5%

Marketing 1%

On each transactions, 10% of immutable tax are applied. The 1% of this tax is going to a marketing wallet who will be used for marketing purpose only.
